

RuWork – Part-Time Job Finder for Undergraduates

University of Ruhuna | Backend Requirement List

1. Student (Job Seeker) Side

- Students should be able to register with personal information, academic information (university, field of study, year of study), and account credentials.
- Students should be able to log in and log out securely.
- Students should be able to search and filter jobs by category (Delivery, Buy and Sell, Tutoring, Event support, Data entry, Content creation, etc.).
- Students should be able to view detailed job information (title, description, category, skills, scope, budget, location, company name, rating).
- Students should be able to apply for a job by submitting an application.
- Students should be able to send a message to the job provider with their contact details.
- Students should be able to view the status of their job applications (Completed, In progress, Pending review).
- Students should receive a notification when they are hired for a job.
- Students should be able to post a review and rating for a job/job provider after completing a job.
- Students should be able to view their job history.
- Students should be able to view and edit their own profile.

2. Job Provider Side

- Job providers should be able to register with company information (name, address, phone number, size, industry, website, description).
- Job providers should be able to log in and log out securely.
- Job providers should be able to post a new job through a multi-step process (title, required skills, scope of work, budget type, description).
- Job providers should be able to preview a job post before publishing it.
- Job providers should be able to verify their account via email before a post goes live.
- Job providers should be able to view all jobs they have previously posted.
- Job providers should be able to view all applications received for a specific job post.
- Job providers should be able to accept or decline a student's application.
- Job providers should be able to manually adjust/approve the price of a job when accepting an application.
- Job providers should be able to edit or delete their own job posts.
- Job providers should be able to view reviews posted about them.

3. Reviews & Ratings

- Customers (students) should be able to post reviews and ratings for completed jobs.
- Customers should be able to delete their own reviews.
- Admins should be able to delete inappropriate or spam reviews.
- The system should calculate and display an average rating for each job provider.

4. Notifications

- The system should send email notifications for account verification.
- The system should notify students when their application is accepted or declined.
- The system should notify job providers when a new application is received.
- The system should notify users of new messages.

5. Payments

- The system should automatically calculate the booking/job cost based on scope and rate.
- Job providers should be able to manually override/approve the final price when accepting an application.
- The system should record payment status for each completed job (Pending / Paid).

6. Admin Side

- Admins should be able to log in through a separate secure admin login.
- Admins should be able to view a dashboard summarizing platform activity.
- Admins should be able to view, approve, or block spam/fraudulent accounts.
- Admins should be able to view and manage all job posts on the platform.
- Admins should be able to view and manage all reviews submitted by users.
- Admins should be able to manage platform settings.

7. System / General

- The system should support role-based access control (Student, Job Provider, Admin).
- Passwords should be securely hashed and validated (minimum length, uppercase letter, number required).
- The system should store and retrieve job categories and skill tags for search and filtering.
